

Lab 3

Due

June 4th, 2026 @ midnight

Prerequisites

Studying the requirements lecture.

Objectives: Requirements Extraction & Engineering

Students will practice software requirements extraction by conducting interviews, creating user stories, and designing questionnaires.

Do

You have been assigned to gather requirements for your project. As a team, your tasks are to extract requirements from stakeholders by asking the right questions, and documenting their needs effectively.

Part 1: Interview Questions (10 marks)

The instructor will be the only stakeholder here. And your team will be the developing team following the SENG process and the Agile methodology to deliver the software product.

- Prepare a **set of 15 interview questions** to understand their needs, expectations, and challenges.
- Ensure your questions cover **functional** and **non-functional** requirements.
- Example:
- **Functional Requirement:** *"Would there be a login functionality?"*

- **Non-Functional Requirement(usability):** "How should the user interface look and feel to make it easy for users to navigate?"

Part 2: User Stories (10 marks)

- Write **10 user stories** using the standard format:
As a [role], I want to [goal] so that [benefit].
- Ensure each story addresses a distinct requirement.

Example User Stories:

As a student, I want to register for program courses.

Part 3: Questionnaire (10 marks)

- Design a **questionnaire with 10 questions** to collect feedback from a larger group of users.
- Use a mix of **open-ended** and **multiple-choice** questions.

Example: "How frequently do you use the current system?" (Options: Daily, Weekly, Monthly, Rarely)

Part 4: Simulated Product Requirements Document (PRD) (20 marks)

- Based on the information collected from the previous tasks and the stakeholder responses, create a simulated Product Requirements Document (PRD). Please use the provided template as a starting point when preparing your document.
- The PRD should include the following:
 - **Cover letter**
 - **Table of Contents**
 - **Introduction:** A brief overview of the project and the stakeholders (hypothetical).
 - **Functional Requirements:** A list of 10 functional requirements, derived from the user stories.

- **Non-Functional Requirements:** A list of 10 non-functional requirements (e.g., performance, security, usability).
- **User Stories:** Include the 10 user stories you wrote in Part 2.
- **Interview Questions:** Include the 10 interview questions you prepared in Part 1.
- **Questionnaire:** Include the 10 questions from your questionnaire in Part 3.
- **Glossary**

HAND IN

- The interview questions, user stories, and the questionnaire have already been submitted to the stakeholder via email, and responses have been received.
- Submit your PRD (Product Requirement Document). A template is shared with you for simplicity to provide an idea of what is expected. Please do not use this template, create one similar.
- Ensure clarity, completeness, and relevance.

Evaluation Criteria:

Criteria	Marks
Interview Questions	10
User Stories	10
Questionnaire	10
PRD Document	20
Total	50
